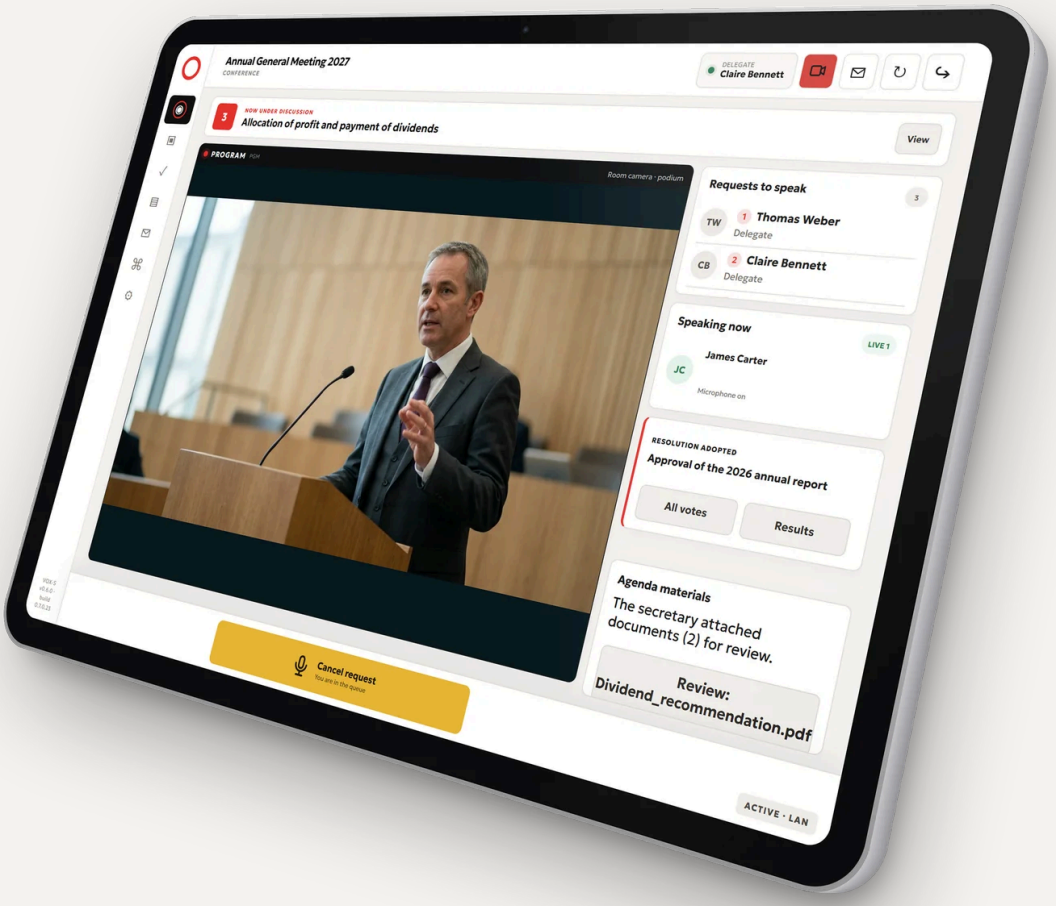
VOXORDIA

VOX-S SOFTWARE CONFERENCE PLATFORM

Voice and Vote.

A conference room on ordinary tablets and laptops. Speeches, documents, voting, simultaneous interpretation, cameras and broadcasting in one system — no consoles at every seat.



- Any device — tablet, laptop or phone
- Minutes in every participant's language
- The camera finds the speaker
- Everyone listens in their own language

WHY

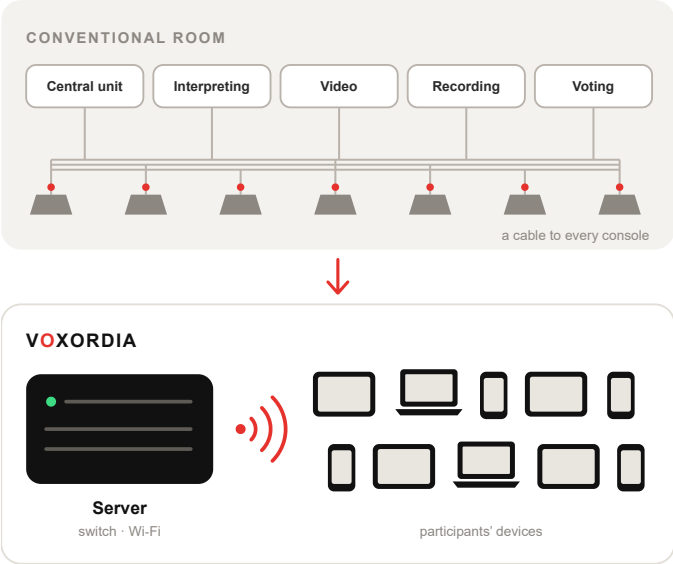
VOXORDIA conference platform — complex made simple

VOXORDIA turns your meeting room into a single system:

participants' own devices → instead of consoles

one system → instead of five, six, seven…

a server update → instead of replacing equipment



Cheaper

No need to buy lots of different equipment and a console for every participant, or to lay cables.

Simpler

One interface for participants, the chair, the secretary and the operator. Everything you need is at hand at the key moment.

More reliable

Less equipment means fewer points of failure. No exotic modules — just a server, a switch and a Wi-Fi access point. And, of course, a tablet, laptop or phone for each participant.

More secure

Participants' audio and video are encrypted, and the system runs inside your network. Only invited participants get in — with personal access and a PIN that is valid for the duration of the meeting. Unauthorised connections are rejected.

More flexible

Hold a meeting in any hall or meeting room of your company — wherever it is needed today. The only requirement is fast Wi-Fi with a route to the server. New features are added with a licence, without replacing equipment.

DELEGATE CONSOLE

The whole meeting on the participant's device

Speaking in order

Requests to speak, a queue, open discussion and chair priority. The order can be changed during the meeting. A break is called with one command: microphones close and the displays show when the meeting resumes.

Agenda and documents

Documents for an agenda item open on participants' devices at the right moment — right away or when the item comes up. A presenter finds the materials for their report at the speaker's place. Personal files stay private until they are attached to the agenda.

The camera finds the speaker

Switch on your microphone and the camera is already on you. When no one is speaking, the wide shot of the room is on air. No room camera? The device's own camera is used.

Clean sound

Everyone hears the room without echo and without their own voice. A closed microphone is heard by no one.

CHAIR

The whole meeting on one screen

The chair sees who is asking for the floor and who is speaking, and gives or withdraws the floor with one tap. The main screen shows several views at once: the room camera, a participant's camera and the document on display.

FOR EVERY ROLE

Chair

Queue, priority and "Next" in one tap. The whole room on one screen.

Secretary

Participants from Excel, QR badges and personal links in one click. The minutes build themselves.

Delegate

Floor, vote and documents on their own tablet, laptop or phone.

Interpreter

A dedicated desk: the room on screen, on air in one tap.

Remote participant

Joins by link. Hears, speaks and votes — as in the room.

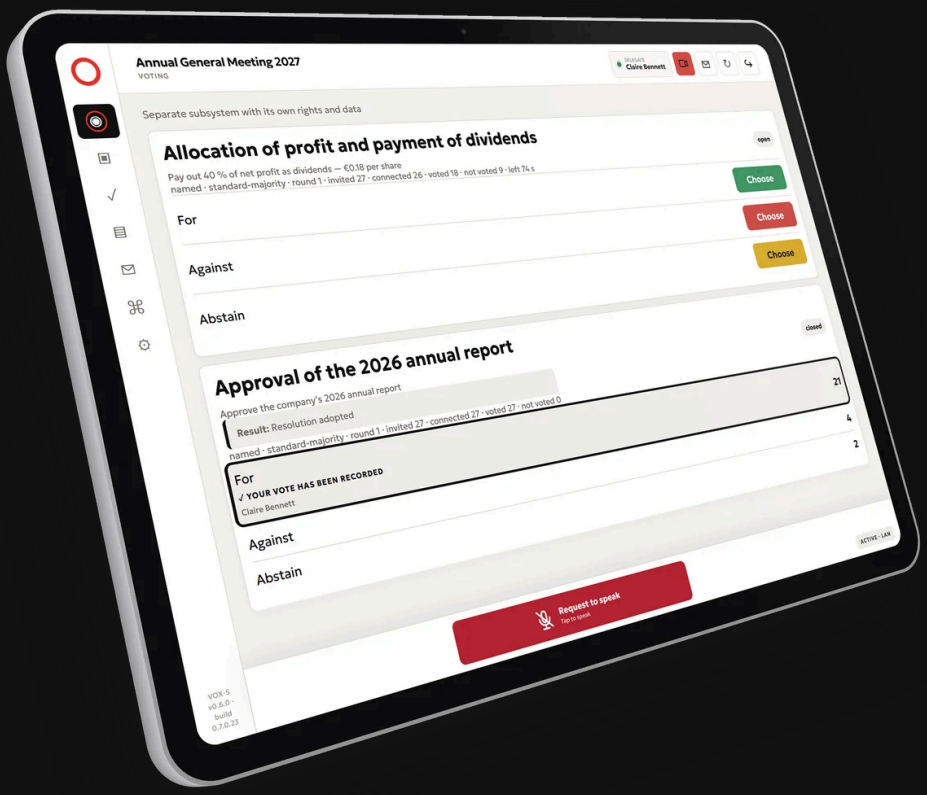
IT and security

Server in your network, Active Directory sign-in, audit log.

VOTING

Voting you can trust

The list of voters is fixed when the vote opens, results cannot be changed after it closes, and a secret ballot stays secret: the system records participation but never links it to the choice.



Counting follows your articles of association or rules of procedure exactly: what the quorum is based on, whether the majority is counted from those present or from the full membership, and which threshold each type of decision requires.

FITS ANY PROCEDURE

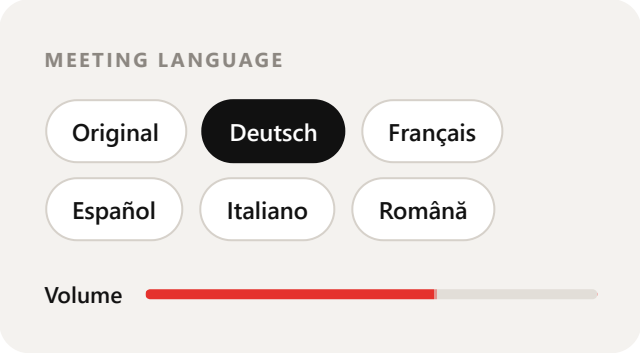
- **Open, secret and roll-call voting**
- **Voting by shares and stakes — for shareholder, member and partnership meetings**
- **Cumulative voting for board elections**
- **Simple, absolute and qualified majority — for example, three quarters**
- **Quorum and counting base: those present or the full membership**
- **Ranked voting, multi-round elections, your own rule templates**

Counting rules are set up to match the articles and rules of procedure of your company or body.

SIMULTANEOUS INTERPRETATION

Everyone hears the meeting in their own language

Interpretation is built into the system, not bolted on. The operator sets up the languages and assigns interpreters; each participant chooses language and volume on their own device — the meeting picture stays the same.



- **A channel for each language**
  And if the interpreter is silent, the original sound from the room comes through.
- **Interpreter desk**
  The room on screen, who is speaking, the route “listening → interpreting”, on air and cough in one tap.
- **Main and backup interpreter**
  Handover without a pause, and relay interpretation for rare languages.
- **Interpretation channels recorded**
  Every language is saved together with the meeting recording.

DOCUMENTS

Working on a document together

The presenter opens a document and every participant sees the same page at the same zoom. Marks appear for everyone at once, each in its author’s colour and with their name.

- **Pen, highlighter, line, circle and text**
  Underline a figure, circle a paragraph, leave a note in the margin.
- **Everyone has their own colour**
  You see at once who marked what. Other people’s marks cannot be erased or moved.
- **Follow the presenter**
  Zoom into a detail or look ahead, then return to the presenter with one tap.
- **Show in the hall**
  The document goes to the hall screens together with its marks — full screen or as a separate multiview tile.

MINUTES

Minutes in every participant’s language

While the meeting runs, the system records every speech. Afterwards it recognises the speech, builds the timeline and translates the approved text into the meeting’s languages. All of it happens on your server: not a single sentence goes to the cloud.

1. **Recognition**
   Each speaker’s words become text tied to the timeline.
2. **Review**
   The secretary corrects individual phrases and approves the transcript.
3. **Translation**
   The approved text is translated into the participants’ languages automatically.
4. **Archive**
   The minutes in every language are stored and never change again.
5. **PDF for signature**
   Timeline, voting results with the decision and annotated documents. A green bar on top means everything has been reviewed.

REMOTE PARTICIPATION

Anywhere, as if in the room

Not everyone can travel. A remote participant opens a personal link or QR code and joins their meeting: hears the room, watches the broadcast, asks for the floor, votes and shows documents.

Join by link, QR code or code

No registration, nothing to install. The code stays valid until the meeting closes — after a dropped connection the participant returns with the same code.

The same rights as in the room

Floor, vote and documents — exactly as the secretary set the participant’s rights.

Media go straight to your server

The shared portal only admits by key. Audio and video never pass through it; there is no third-party cloud.

Works over mobile internet

Lightweight video and broadcast profiles for remote participants.

WHO IT'S FOR

For business and for those who build meeting rooms

Business

Boards of directors and management boards, shareholder meetings, negotiations with partners and international meetings with simultaneous interpretation. Voting by shares, sign-in with Active Directory corporate accounts, minutes and recording — in your own room, without renting equipment or calling in engineers.

Integrators

A licence instead of consoles and a cable to every seat. Audio goes to the network over AES67 and is received by Dante systems, video over NDI: VOXORDIA fits into the room you have already built instead of making you rebuild it.

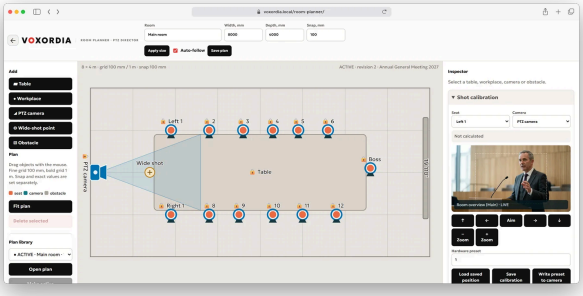
Public authorities

Parliaments, municipal councils and committees: sittings and votes that follow the rules of procedure exactly — with quorum, majority thresholds, roll-call voting and minutes.

FOR TECHNICIANS AND INTEGRATORS

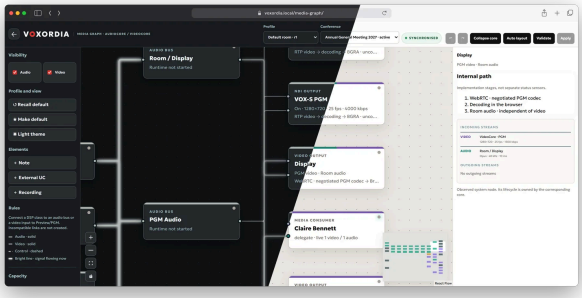
The room is set up in a browser

No separate software and no site visits with a laptop: the room layout, cameras, audio and video are configured in an ordinary browser, and changes are checked before they are applied.



Room layout and cameras

Place the seats, link a PTZ camera and save a shot for every seat — from then on the camera aims by itself.



Audio and video map

All sources, processing and outputs on one live diagram: you can see what is going where right now.

Fits the room you already have

Audio over AES67 and Dante, video over NDI, cameras over ONVIF and RTSP. Existing consoles and sound can stay.

HOW TO START

Become one of the first VOXORDIA sites

We invite companies and integrators to set up a conference room together with us: we deploy the system, configure it to your procedures and run the first meetings alongside your team.

1. **Server in your network**
   We deploy the system as one package. Data never leaves the company.
2. **Set up to your rules**
   Roles, voting rules, languages and participants — to match your articles.
3. **First meetings together**
   Our engineers work alongside your team at the first conferences.
4. **Start with one room**
   Your current equipment can stay in place. Scale up once you are convinced.

See it in a live meeting

Tell us about your room and your meetings — we will get in touch and arrange an online demonstration.
